## USER MANUAL FOR GALASPORT HELMET

Thank you for choosing GALASPORT helmet that meets the highest requirements of the quality and security. We do believe that it will serve you well. Please pay attention to the following text. In the case of unclarity please contact your seller.

**1. Adjustment and Fit:** For adequate protection this helmet must be a snug fit on the wearers' head, and worn in a manner that does not allow undue displacement. It is worthwhile taking the time to ensure correct adjustments. The helmet can be adjusted to achieve a snug fit by the inclusion of self adhesive foam strips.

The chinstrap must be fastened correctly. Loosen the chinstrap at buckle, engage buckle and pull the strap tight to firmly secure the helmet with the strap under the chin. To release, squeeze the sides between the thumb and forefinger. Once adjusted it should not be possible to push the helmet off your head either front or rear.

**2. Use and transport:** This helmet is manufactured by GALASPORT, s.r.o. registration number 25246283, in accordance with European security standard EN 1385:2012

Helmet name	Product Number	Head Size
Tony	01625TCARBONCE	54 – 60cm

This helmet is designed for Canoeing, Kayaking, Rafting, Surfing, Hydrospeed and other similar White Water Sports.

**It is NOT designed for use with any Powered Craft or for Wheeled Sport!**

This helmet is not designed to be used on the water difficulty level 5 and 6 according to the International Canoe Federation. This helmet is designed and made to absorb the energy of a blow by the partial destruction of or damage to the shell or harness. Such damage may not be readily apparent. Any helmet that is or has been subjected to severe impact should be replaced.

The attention of users is drawn to the danger of modifying or removing any of the original component parts of the helmet, other than is recommended by the helmet manufacturer. Helmet should not be adapted for the purpose of fitting attachments in any way other than that recommended by the helmet manufacturer. Under no circumstances must a component or accessory other than a „GALASPORT“ component or accessory be used on a helmet.

Do NOT apply paint, solvents, adhesives, self adhesive labels or stickers to the helmet other than in accordance with instructions from the helmet manufacturer.

Helmets should be transported in a manner that is not likely to reduce the adequate protection afforded. During transportation the helmet must not be stacked or compressed or be subjected to abrasion, contamination or prolonged exposure to direct sunlight.

**3. Care, Inspection and Storage:** The helmet is a complete system consisting of shell and harness.

The useful life of a helmet is affected by many factors, including heat, cold, prolonged exposure to direct sunlight, abrasion and misuse. Before use this product can be stored in its original packaging for up to 5 years in a darkened room at ambient temperature.

The helmet should be examined before each use for obvious signs of cracking, brittleness, or damage to either shell or harness. Whilst a helmet is free from these defects it is suitable for its intended purpose. Under normal circumstances the helmet should offer adequate protection for up to 5 years. However, in some intensive use situations this adequate protection period could be substantially reduced.

Helmets are a protective aid and whilst affording the wearer adequate protection do not protect the wearer against every eventuality.

**4. Cleaning and after use Storage:** It is recommended that the helmet be cleaned at suitable intervals by using warm water followed by drying with a soft cloth. The helmet should not be cleaned with abrasive substances or solvents. Dry the helmet at room temperature in a dry atmosphere. Do not force dry in direct heat.

After use and when dry the helmet should be stored in a cool dry place, out of direct sunlight. The helmet should not be loose stacked or in contact with any contaminants.

**Accessories and spare parts together with instructions are available from:**
